

Distiller Job Options Location

The Imperial distiller job option is available on request to use with Acrobat distiller. If you are working on a Macintosh platform, the distiller job option should be located in your Settings folder as follows: MacintoshHD/Library/Application Support/Adobe PDF/Settings. If you cannot copy to this folder, and you have Acrobat Distiller 6 or higher, you can add the job option by launching Acrobat Distiller and under the Settings menu, go to “Add Adobe PDF Settings...” and bring it in that way.

On the PC platform, the distiller job option should be located in your Settings folder as follows: C:\Program Files\Adobe\Acrobat 7.0\Distillr\Settings. Please note that if you are using a different version of Acrobat, you may have a folder that is named for your version of Acrobat instead of Acrobat 7.0. If you cannot copy to this folder, and you have Acrobat Distiller 6 or higher, you can add the job option by launching Acrobat Distiller and under the Settings menu, go to “Add Adobe PDF Settings...” and bring it in that way.
